Why upgrade to SharePoint 2013?

The new way to work together

What is SharePoint?

Share

Organize

Discover

Build

Manage

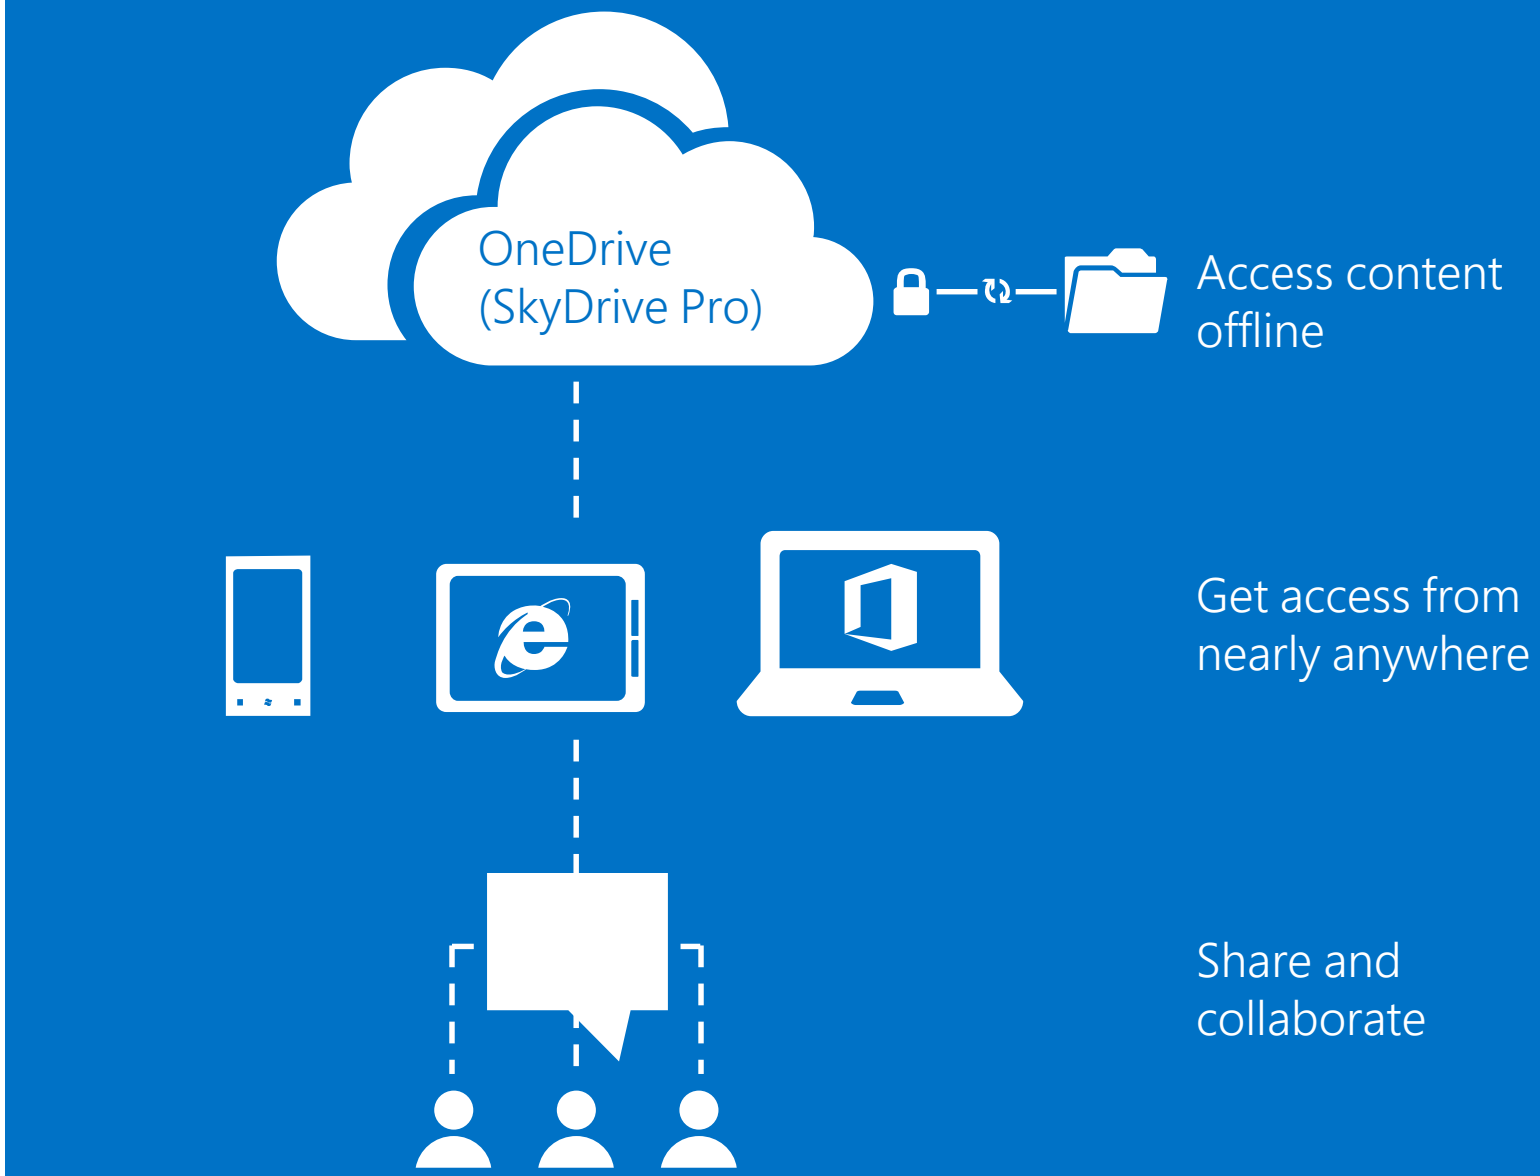
SharePoint

Engage, collaborate, and connect across the organization

Get your workforce behind the company vision by engaging and connecting with everyone in the organization using tools that enhance collaboration.

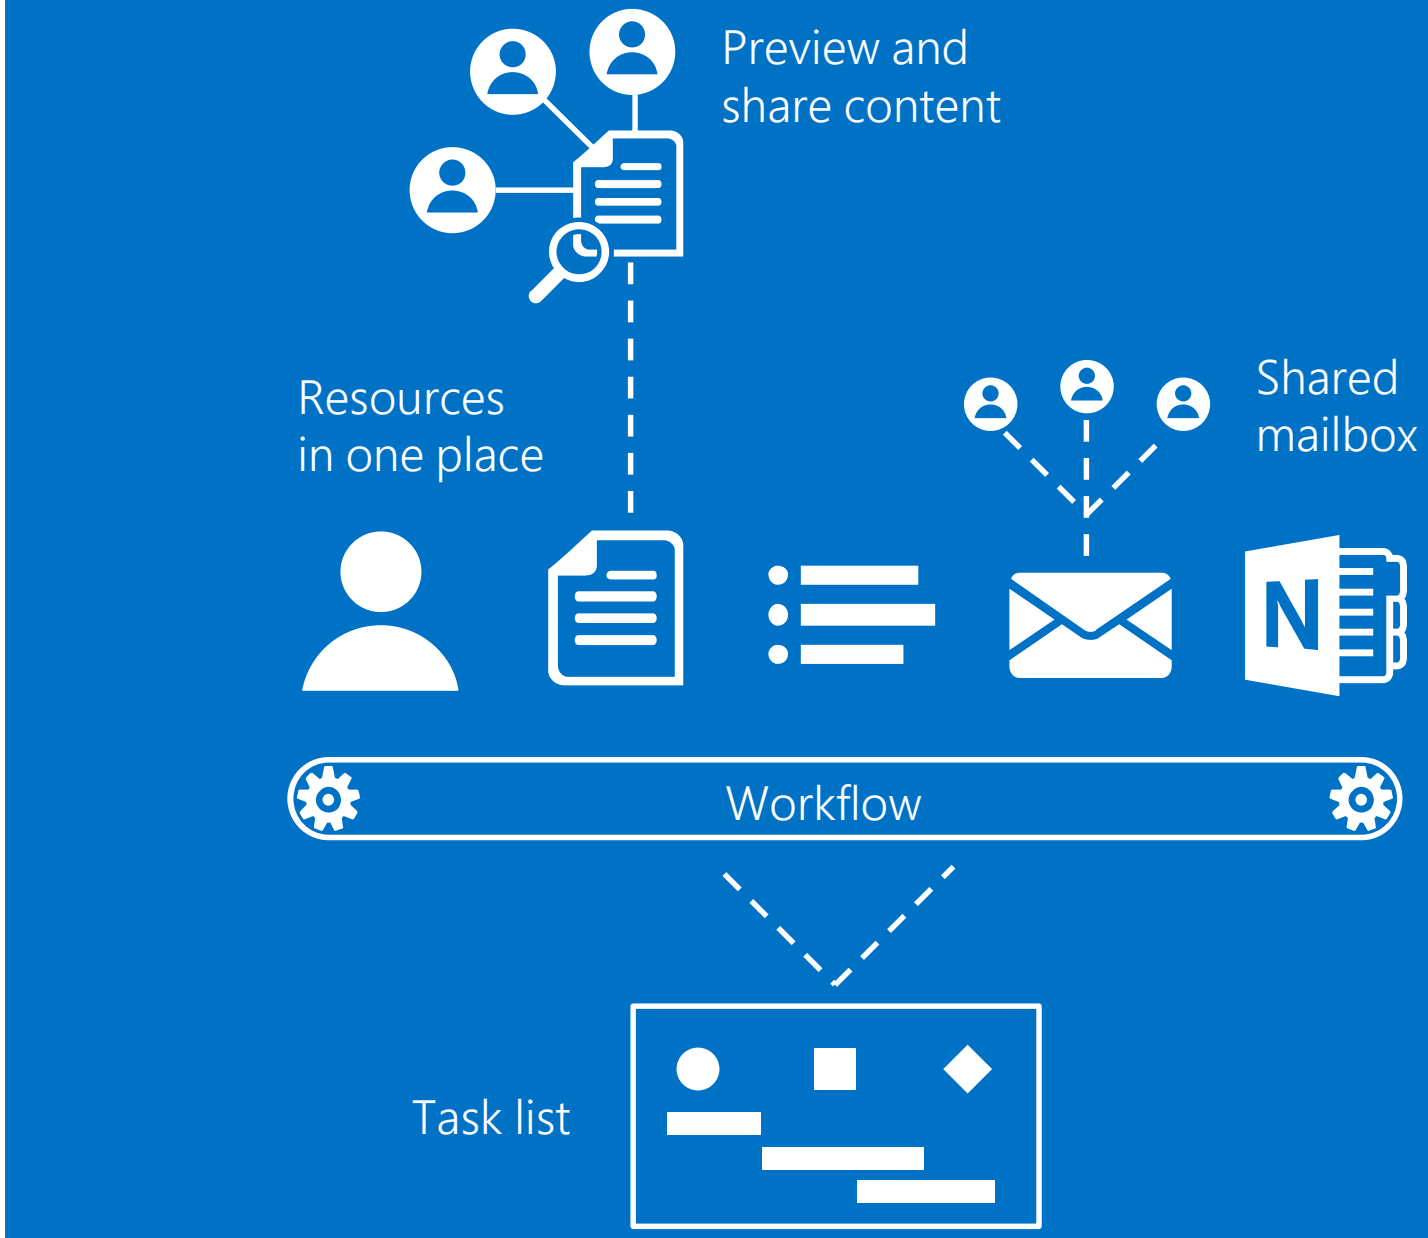
Create, review, and share content

Give everyone a simple way to create, review, and publish content with secure tools that can be accessed from virtually anywhere.



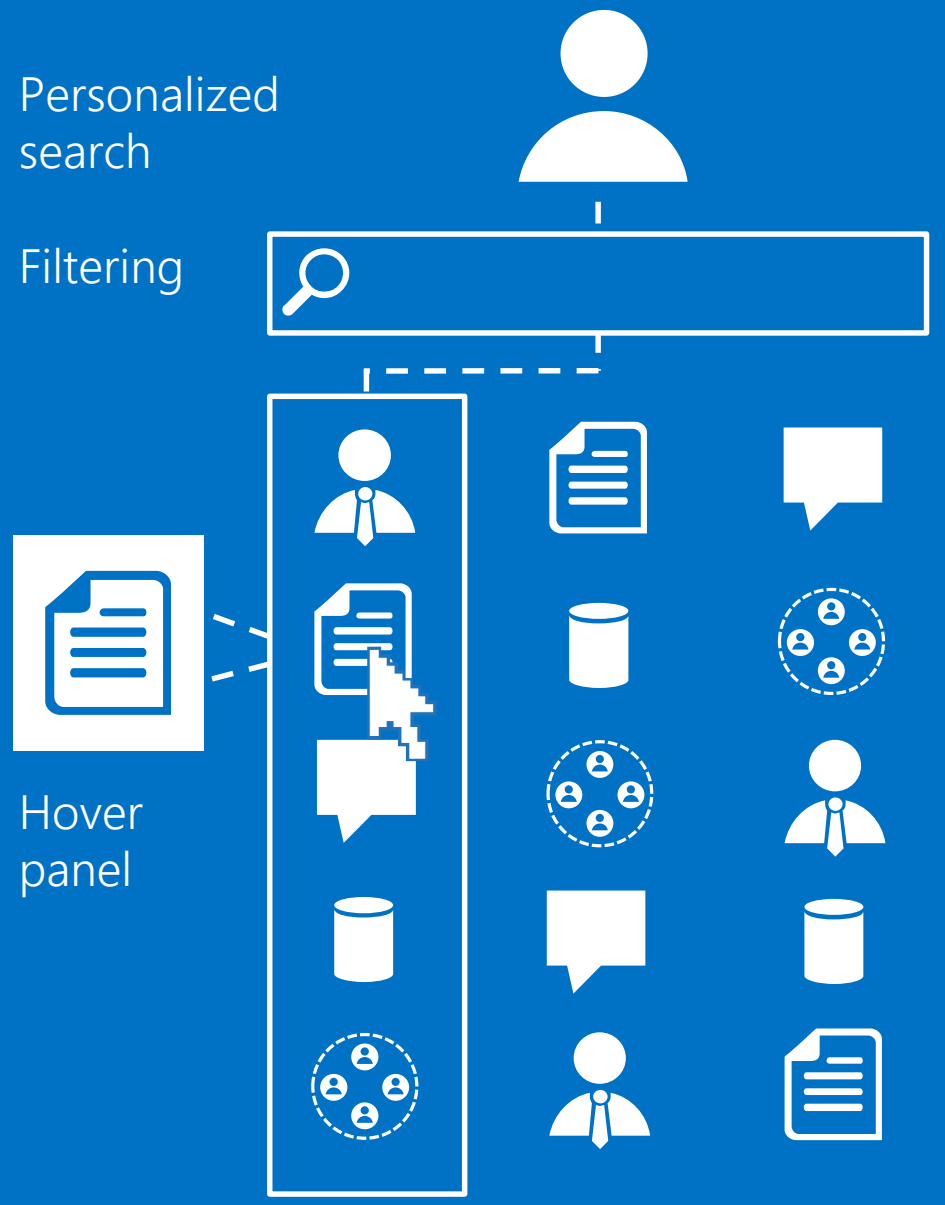
Keep projects on track

Give your team a central workspace to store, secure, and access all project resources with easy-to-use tools that keep projects running smoothly.



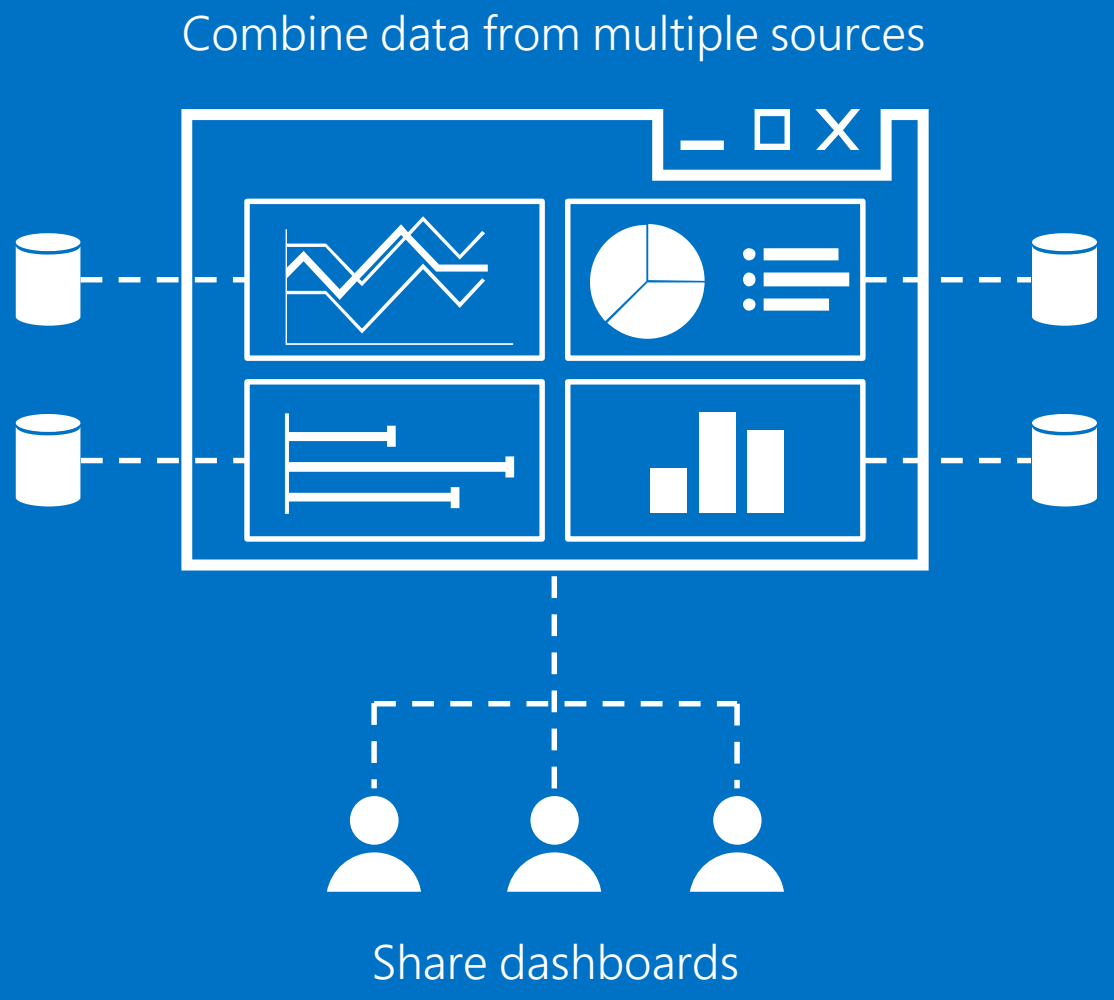
Find answers

Give your workers the ability to quickly and easily find the right documents, people, and information so they can get the answers they need to get things done.



Make informed decisions

Gather information from across your organization to make informed business decisions and share your insights with others.



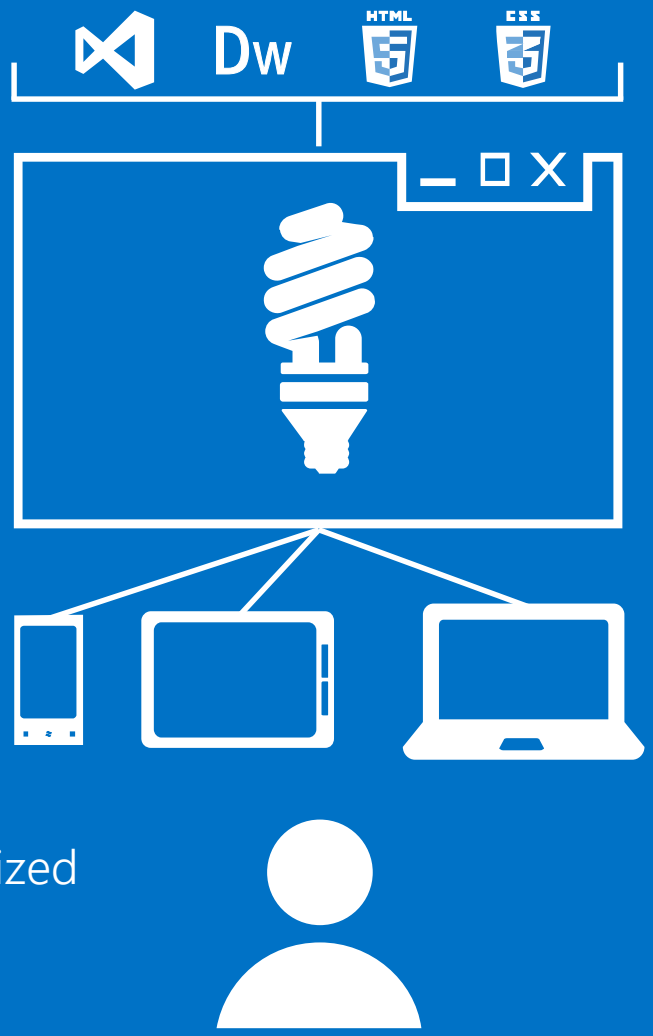
Build engaging websites

Deliver tailored
web experiences to your users
by adopting a platform that
helps you design, build, and
manage eye-catching websites
with minimal efforts

Use the tools you know

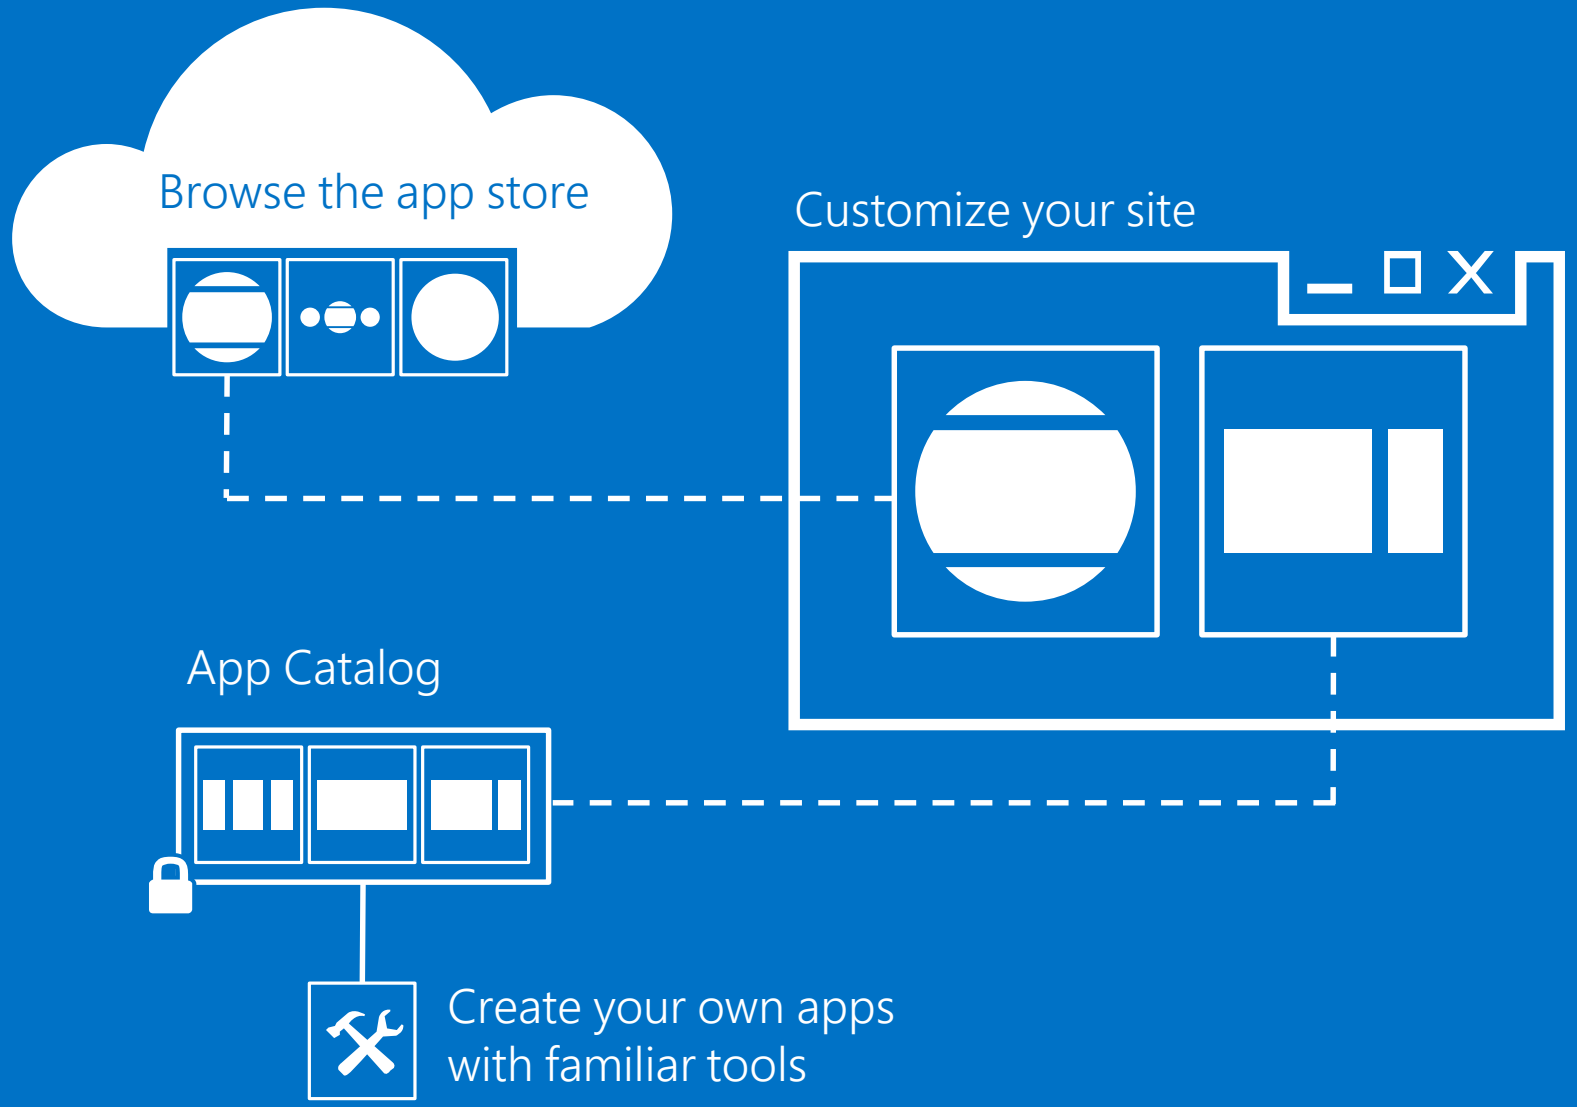
Create better sites

Deliver personalized experiences



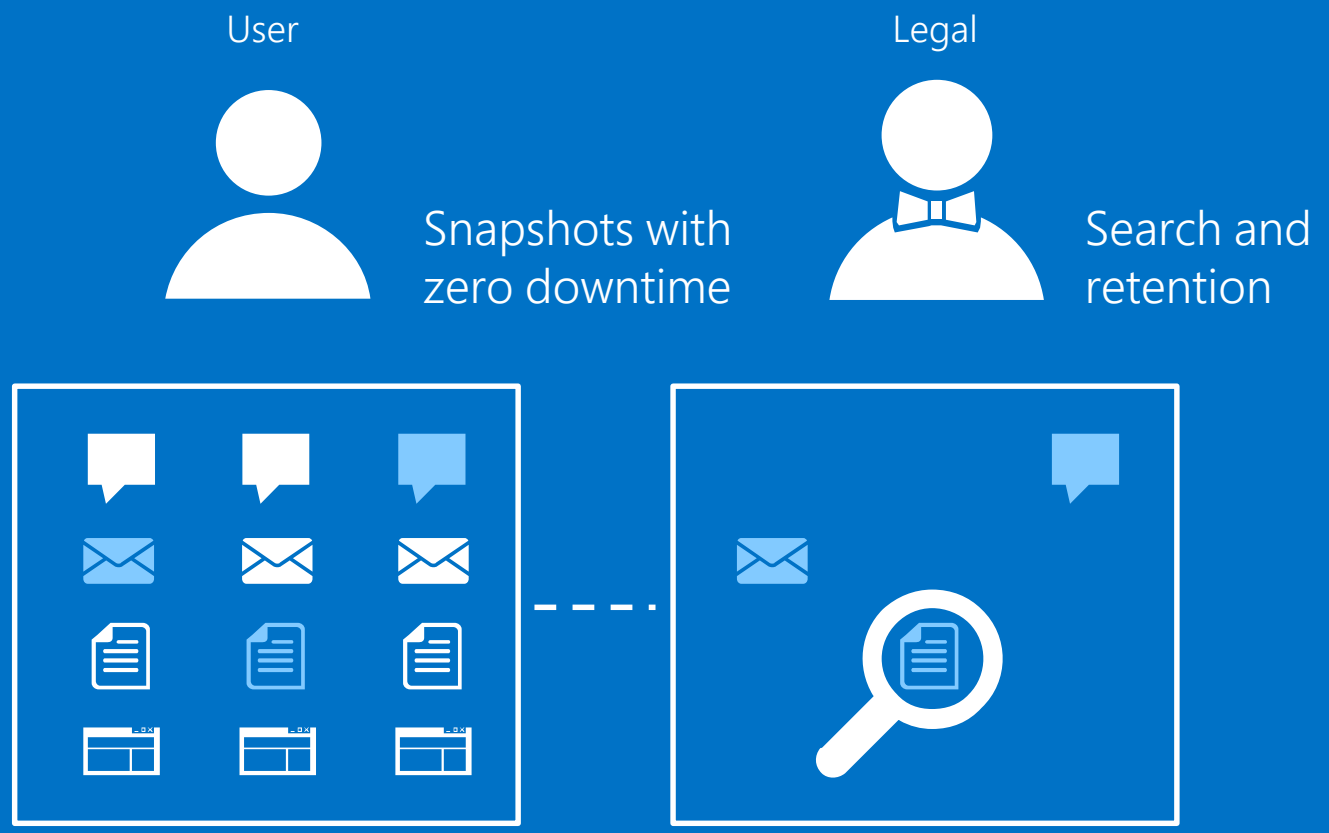
Enable new user experiences through the app model

Customize your site by finding what you need in the app store or creating your own apps



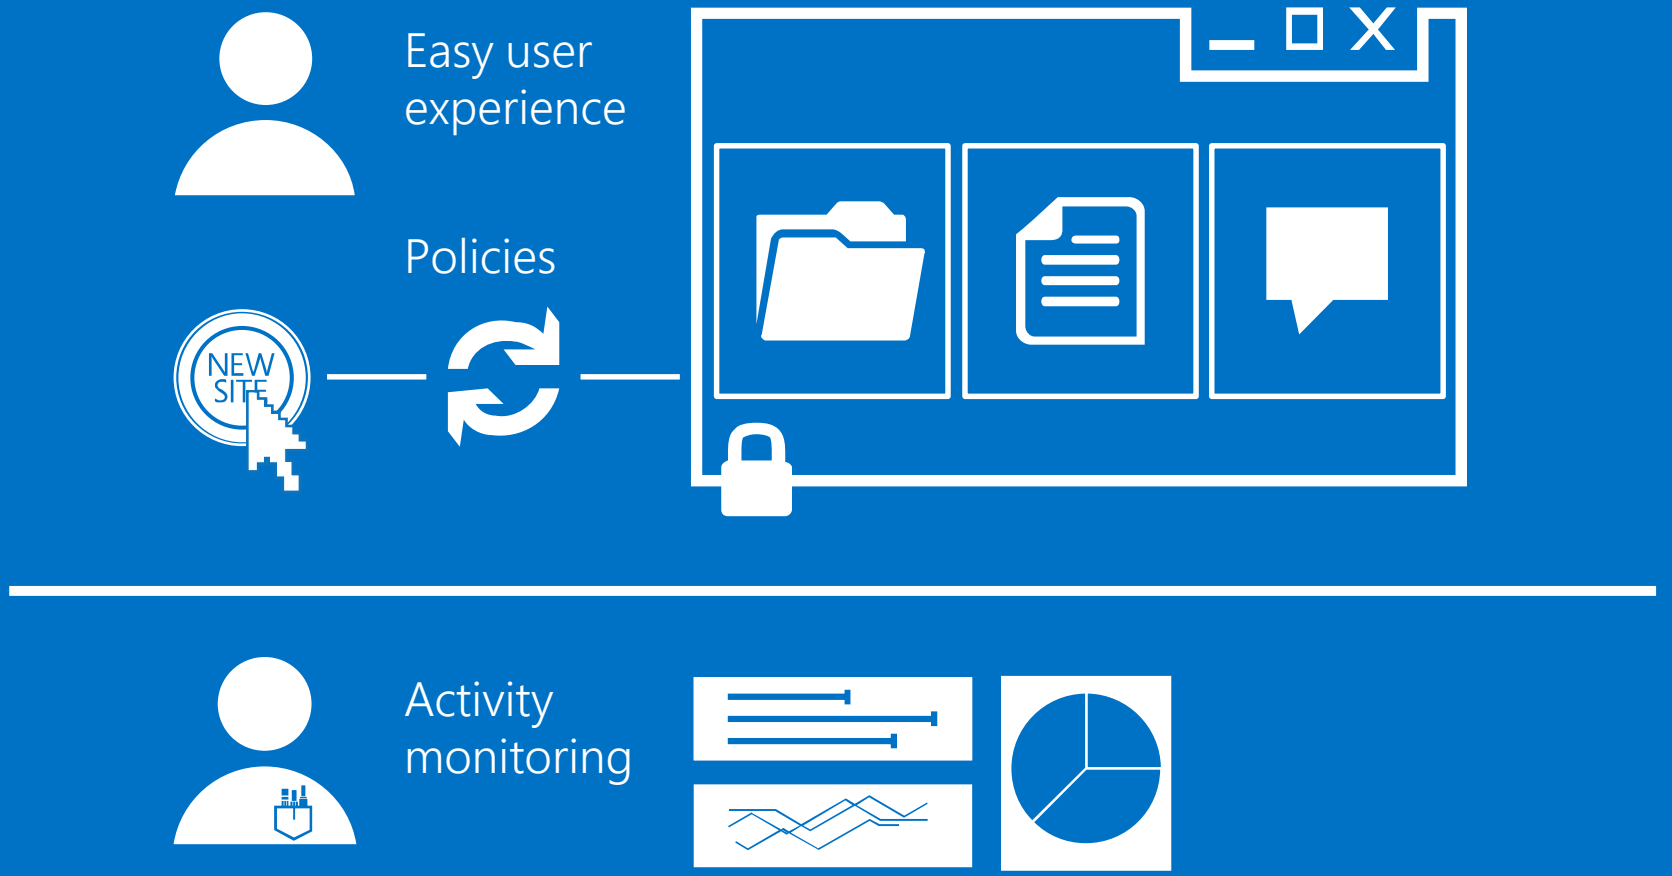
Reduce risk, protect data, and meet compliance standards

Give IT the control they need to protect your organization's data, while giving users the tools they need to get work done without interruptions.

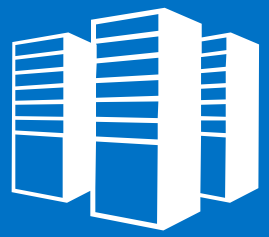


Reduce IT support costs while enabling end users to do more

Give users the ability to create sites without IT involvement, while still complying with organizational policies.



Now is the perfect time to move to the cloud!

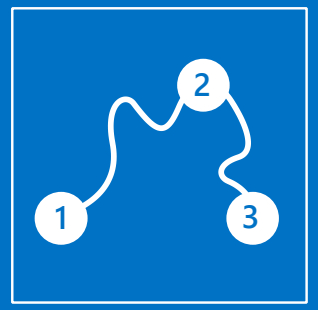


On-premises

Hybrid

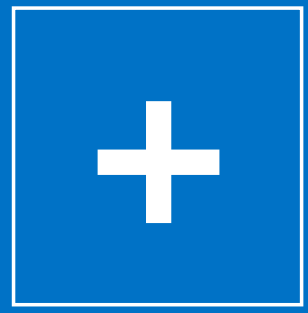
Cloud

Simplified upgrade from older versions



Deferred Site Collection Upgrade

Upgrade Evaluation Site Collection



Site collection health checks
